ОТЧЕТ

по зачетной работе

Список задач и запланированных дел

Дисциплина: <u>Я</u>	зыки интернет-проі	<u>граммирования</u>	
Студент	<u>ИУ6-35 Б</u> (Группа)	(Подпись, дата)	<u>Дулина И.А.</u> (И.О. Фамилия)
Преподаватель		(Подпись, дата)	Маняшев Э.Р. (И.О. Фамилия)

Требования:

- Для реализации использовать Ruby on Rails.
- Необходимо иметь контроллеры, обеспечивающие обработку запросов.
 - Необходимо использовать модели для хранения данных в БД.
 - Необходимо обеспечить аутентификацию пользователей.
- •При реализации клиентской части необходимо применить код на языке Javascript и таблицы стилей CSS.
- •Провести интернационализацию приложения и обеспечить вывод надписей на русском языке (см. пример в лекции 11).

Цель: написать приложение, в котором авторизованные пользователи смогут создавать свой ежедневник, заполнять его своими задачами

Задачи:

- Создать страницу с выводом всех записанных задач в зависимости от того, какой пользователь совершил вход
- Спроектировать БД для пользователей и задач, которая будет содержать в себе внешний ключ на id пользователя
- Реализовать авторизацию
- Добавить возможность добавлять дату, время, важность, а также процесс выполнения (сделано или нет) для каждой задачи
- Добавить возможность удалять задачу
- Добавить динамический вывод окна с изменением записи
- Добавить динамический вывод подробной информации о каждой записи
- Добавить динамический вывод модульного окна, где можно вписывать свои мысли и размышления о прошедшем дне
- Добавить вывод самых важных задач на другой части страницы
- Реализовать интернационализацию приложения
- Написать интеграционные тесты и тесты в браузере при помощи Katalon Recorder / Selenium Webdriver.

Создание приложения:

```
$rails new diary task
```

\$cd diary task

\$ rails g controller Sessions --no-test-framework

\$rails g controller Main menu settings

\$rails g scaffold User name:string email:string:uniq password_digest:string remember token:string:index admin:Boolean

\$ rails g scaffold Note User:references day_date:date time:string task:string weekday:string colour:string diary:text info:text import:boolean if done:boolean

\$ rake db:create

\$rake db:migrate

\$rake db:migrate RAILS_ENV=test

Зависимости приложения:

Gemfile добавить

```
gem "jquery-rails"
```

gem "bootstrap"

gem "sassc-rails"

gem 'momentjs-rails'

gem 'bootstrap-datetimepicker-rails'

gem 'i18n'

#для selenium

gem 'rspec-rails'

Сценарии javascript:

app/javascript/application.js

import "@hotwired/turbo-rails"

import "controllers"

import "jquery"

import "jquery_ujs"

import "popper"

```
import "bootstrap"
import "src/main"
//= require moment
//= require bootstrap-datetimepicker
//= require pickers
app/javascript/src/main.js
$(document).on('click', '.btn-close', function () {
  $('.alert').fadeOut();
});
//ФУНКЦИЯ ВЫВОДА СБОКУ
function show result(data) {
  // document.getElementById("right").value=";
  console.log(data);
  const result = document.getElementById("right");
  result.innerHTML = "<div>" + data + "</div>";
  // Создать кнопку
  let newButton = document.createElement('button');
  newButton.classList.add('btn', 'btn-primary');
  newButton.textContent = Hide Button;
  newButton.addEventListener('click', function () {
    document.getElementById('right').innerHTML = ";
    // Очищаем содержимое целевого элемента
  });
  // Добавить кнопку на страницу
  document.getElementById("right").appendChild(newButton);
$(document).ajaxSuccess(function (event, request, options, data) {
  console.log(options)
```

```
let form url = locale+options.url
       console.log('main right form success', data, 'form url', form url);
       if (form url.includes('main/adding/')) {
               show result(data.value);
        }
});
                                                                                                  Таблицы стилей:
app/assets/stylesheets/application.scss
@import "bootstrap";
@import "bootstrap-datetimepicker";
                                                                                              Другие настройки:
config/initializers/assets.rb
Rails.application.config.assets.version = "1.0"
Rails.application.config.assets.precompile +=
   %w( jquery.min.js jquery ujs.js bootstrap.min.js popper.js)
config/importmap.rb
pin all from 'app/javascript/src', under: 'src'

```
Finished in 1 minute 27.43 seconds (files took 6 seconds to load)
3 examples, 0 failures
```

Рисунок 23 – вывод в консоль об успешном прохождении всех тестов Selenium

Вывод: было сделано приложение для ежедневника, предоставляющее авторизованным пользователям возможность: вносить и просматривать свои задачи с учетом их важности и статуса выполнения, добавлять, удалять, редактировать каждую из них, сохранять мысли и размышления о прошедшем дне, просматривать наиболее важные задачи на отдельной части страницы при помощи удобного вывода и выбирать удобный язык для гибкости использования. С точки зрения разработки приложения была сформирована БД с таблицами users и notes со связью одно ко многим, реализована авторизация и разработаны интеграционные тесты и тесты в браузере.
